* ALERT *

Malaria Crisis Strikes Children in Africa

Amidu was brought to Children of the Nations’ Sierra Leone clinic with a dangerously high fever, vomiting and weak.

Tests revealed a familiar enemy: malaria.

Malaria causes fever and flu-like symptoms. Without treatment, it can lead to seizures, organ failure, and even death—and children, like Amidu, are particularly at risk.

Malaria is treatable. But it’s hard for a child living in poverty to get the medical care they need.

Will you make sure a child like Amidu has the emergency care they need to fight malaria and stay alive?

Give a child emergency medical care for just $25.

✓ YES, I’ll give emergency medical care to a child like Amidu!

I’ve enclosed my best gift of:

☐ $25 for 1 child
☐ $50 for 2 children
☐ $100 for 4 children
☐ $250 for 10 children

You can save time and money by giving online at donate.cotni.org/emergency, or by calling 360-698-7227.

Why Medical Care Matters

Life is hard for children living in poverty. Especially this time of year. Just look at Amidu’s story on the back page.

Children in Uganda are starting school again. This often means the risk of walking long distances, sometimes in the dark.

Children in Malawi are in the middle of the rainy season, which means exposure to the elements—and mosquito-borne diseases, like malaria.

When you give children medical care—especially emergency care—it is literally life-saving.

Thank you for giving children in poverty the gift of health.

For the Children,
Chris and Debbie Clark
Founders

God used you and the clinic you built in the Dominican Republic to save Pablo’s life.

Medical Miracle, Thanks to You!

Your support of the medical clinic helped save Pablo’s life

Three-year-old Pablo might not be alive today—or be able to see—if it weren’t for you.

Pablo lives in a poor village in the Dominican Republic. His family can’t afford regular doctor visits and medications. Instead, Pablo relies on the kindness of you and Children of the Nations to keep him healthy.

Pablo struggled to breathe and could barely sleep. He needed surgery, and his parents didn’t know what to do. That’s where you stepped in. A medical team—supported by your generous giving—was prepared to perform the surgery.

The doctors were operating at the clinic you helped build, and things were going well at first. But toward the end of his surgery, Pablo’s heart rate and breathing changed. He was getting worse, and fast. When the team checked Pablo’s fever, it was 108 degrees. He was suffering from a rare reaction to the anesthesia. The medical team rushed Pablo to the hospital, where doctors were able to stabilize him, but they were afraid he would have lasting consequences and maybe even brain damage.

When he woke up, their fears were confirmed—Pablo was blind.

Three weeks passed while everyone prayed for Pablo. And God did something incredible in Pablo’s life. The little boy regained his sight!

Your generous donation made all of this possible! You helped build the clinic and supported the medical team. Thank you for playing your role in saving Pablo’s life!
